# Energize Ohio Building Ohio's Energy Future

## Ohio Energy Facts

- In 2012, Ohio was the fourth largest coal consuming state in the nation behind Texas, Indiana, and Pennsylvania. Roughly 90% of the coal consumed in Ohio is used for electric power generation.
- Gross natural gas production in 2013 totaled 186,181 Million Cubic Feet, which was the states highest production since 1984.
- Ohio had the seventh largest crude oil refining capacity in the nation in 2013.
- Ohio ranked fifth in the nation in 2011 in energy consumption by the industrial sector and output from its factories accounted for 17% of the state's gross domestic product (GDP); the state contributed 4.7% to the total U.S. manufacturing GDP in 2012.
- From 2002 to 2012 the per capita energy expenditures in Ohio have increased by 77 percent to \$4,269. On average, Ohioans spend 12 percent of their per capita income on energy expenditures.
- In August 2003, a transmission failure in Ohio led to the largest blackout in North American history, affecting over 50 million people.
